Simple & Strong Ender 3 Camera Holder - Capture Your Prints!

Hey fellow makers!

I'm excited to share one of my very first 3D design projects with you all: a simple yet incredibly strong camera holder designed specifically for your Ender 3 3D printer.

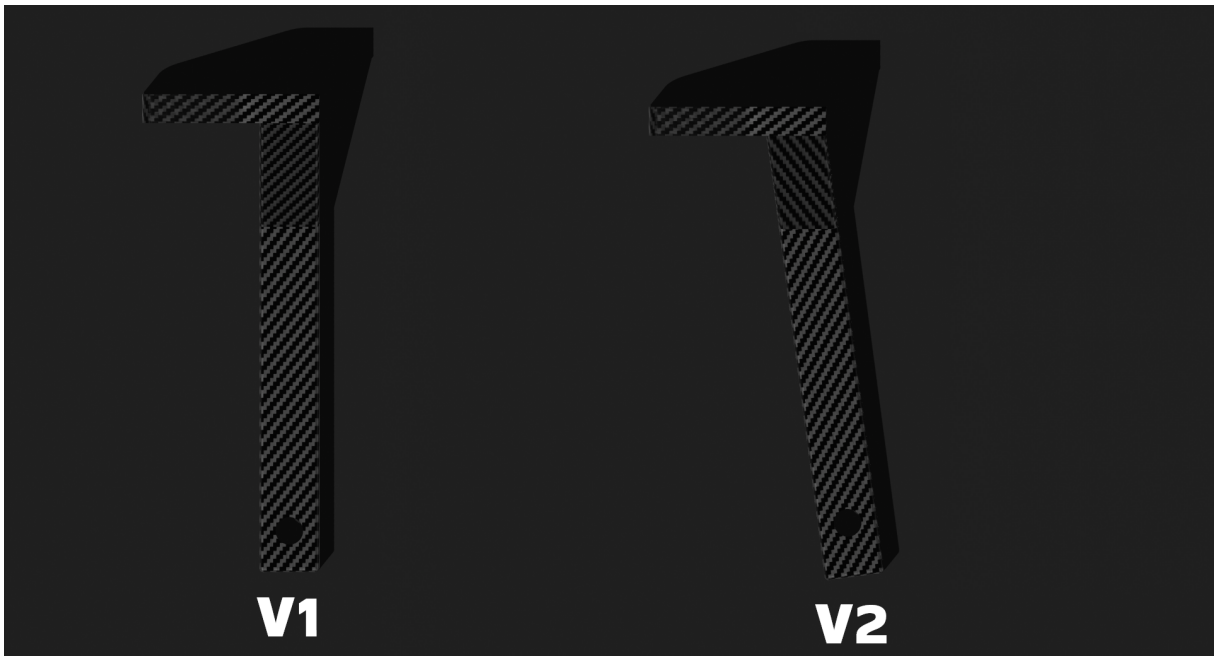

This camera holder is designed with simplicity and durability in mind. It's super easy to set up and requires absolutely no additional parts besides a single bolt.

Speaking of the bolt, I've utilized a standard 1/4"-20 UNC camera tripod bolt for mounting your camera securely. A big thank you to the creator of

this fantastic collection, which you can find here: Camera Tripod Bolt Collection (UNC 1/4-20). Be sure to check out their other great designs!

For me, this model took approximately 1 hour to print, making it a quick and satisfying project. It's designed to be robust, ensuring your camera stays firmly in place while your printer works its magic.

I've included **two distinct versions** of the camera holder to give you some flexibility in how you want to mount your camera. Take a look at the image below to see the differences between **Version 1 (V1)** and **Version 2 (V2)**:

I hope you find this design useful and enjoy capturing your awesome 3D prints! As this is one of my first designs, I'm always open to feedback and suggestions. Let me know what you think in the comments! Happy printing!
Tested in: Ender 3 Pro and Ender 3 V2
