Relocatable Power Supply: One of the biggest advantages of this design is the ability to **easily move your power supply**. This offers you more flexibility when setting up your printer and helps with better cable management. Furthermore, this relocation makes it possible to equip your printer with a **second Z-drive**, which can significantly improve stability and print quality.

Dust Protection for Ventilation Holes: To protect the internal components from dust and dirt, I've **added a shield** above the ventilation openings on the top of the brackets. This helps maintain efficient airflow and extends the lifespan of your power supply by preventing dirt buildup.

Improved Z-Axis Motor Compatibility: The design has been carefully adapted to ensure that the brackets **do not touch the Z-axis motor**. This guarantees smooth movement and hassle-free installation without any interference.

Integrated Power Switch Cutout: I've designed a **precise cutout** where the power switch fits seamlessly. This not only provides a neat finish but also makes the switch easily accessible.

Lowered Power Supply Position: The entire power supply has been positioned slightly **lower**. This clever adjustment creates **extra space**, allowing sensor cables to run neatly under the extrusion profile. The result is tidy and secure cable management, contributing to a more streamlined build.
